

To better understand a portfolio, connect complimentary analysis.

A single analytical approach can't capture the entire picture. FactSet's unique combination of portfolio analytics applications is the solution you need to create a more complete, effectual process for selecting and monitoring managers.

FactSet's Portfolio Analytics suite lets sponsors study sub-advisor performance, composition, characteristics, risk, and style on a single, linked platform. Each application in the suite emphasizes the analytical strength of its approach without sacrificing the continuity advantages of a single analysis. The result is a more complete assessment of an existing or potential sub-advisor.
